

How to Print the No Sag Bag Pattern Files

Thank you for choosing this Beverly Johnson Design. If you have never used a digital pattern before, help is here. **PLEASE**, open the pattern files on a computer, where the file can be saved, **(not on a phone or tablet)** as the files can be downloaded only 3 times. You must open the files with Adobe Acrobat Reader available for free at <https://www.adobe.com/ca/acrobat/pdf-reader.html>

The whole pattern file set consists of:

- Illustrated instructions, a cover page and supply list.
- Two pattern files: individual pages for each size, and a large format file to take to a copy shop that doubles as a projector file for all sizes. You can print at home on either letter size or A4 paper.

1. Page 1 - Cover

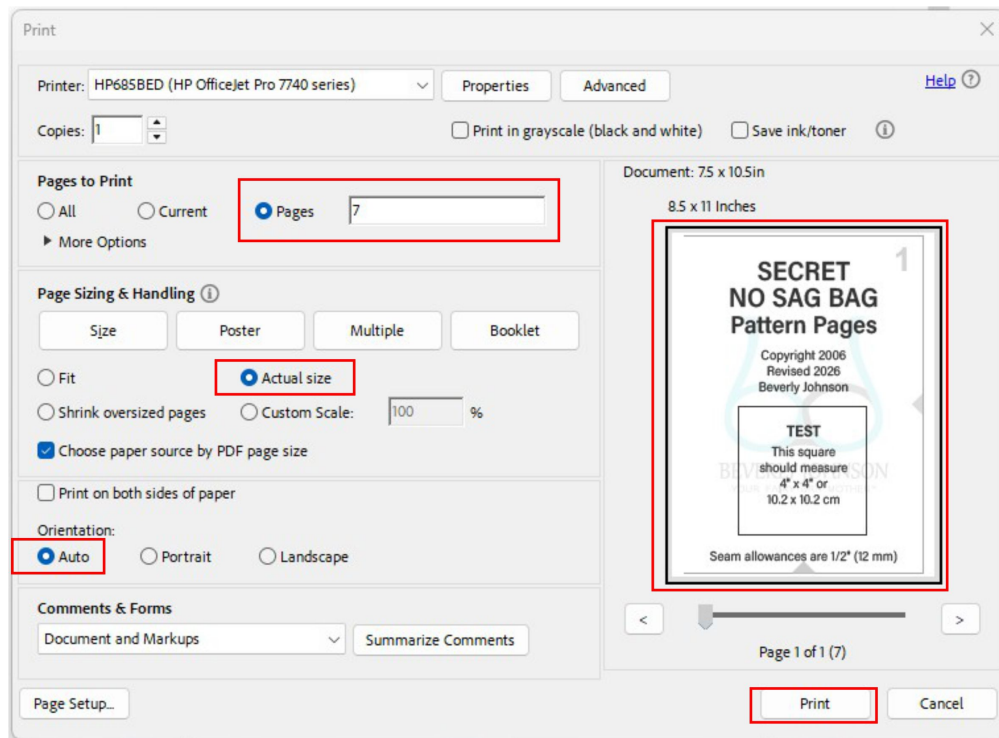

Page 2 - Supply List

Page 3-6 - Instructions

Page 7-26 – Letter size and A4 Pattern pages

Page 27 – Large Format and Projector Page

2. To make sure your printer is printing exactly to size, print off page 7 of the PDF file ONLY to test the printer. The test box is 4” (10.2 cm) square. On the PRINT page, make sure the size is set to **Actual size** and the orientation is set to **Auto**. Clicking Auto ensures that the pattern box will be centered on your paper. If the 4” scale box on page 1 does NOT measure to the correct measurements, adjust your printer to either 99% or 101% in **Custom Scale** and test again. However, since this is a tote bag and not a garment, if the scale is off, so not stress about it.

3. Trim off the excess paper along the right and bottom of the pages (no need to trim off all 4 borders). Tape the pages together, matching the triangles to form a diamond.
